Mr. John Robertus, Executive Officer
California Regional Water Quality Control Board,
San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123

Attn: Ground Water Unit

Dear Mr. Robertus:

Enclosed is the Annual Monitoring report for 2004 for the City of San Diego North City Water Reclamation Plant, as is specified in Monitoring and Reporting Program No. 97-03 for the production and purveyance of reclaimed water.

In addition, results of analyses performed on North City samples, as part of the Metropolitan Wastewater system-wide Quarterly Sludge Project, a portion of the City's Pretreatment Program, have also been included.

Mr. John Robertus, Executive Officer

January 28, 2005

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,

ALAN C. LANGWORTHY

Deputy Director

Environmental Monitoring & Technical Services Division

INTRODUCTION:

The purpose of this document is to both meet the requirements of Monitoring and Reporting Program and to provide a reference source and resource tools for both regulatory agencies and City staff and their consultants. To this, end the past year's data is presented in tabular and graphical form. To make this document more useful we have included information on the operational data, background analyses and process control information.

The source point of samples for monitoring and determining compliance for the reclaimed water was changed¹ to the source identified as "N34-REC WATER" from the source point, "N30-DFE" (disinfected final effluent), used in previous years. The N30-DFE and other data are included in this report

Notes on data conventions and analyses:

It should be noted that for averaging purposes "less than" and "not detected" (nd) values were treated as zeros. In many parts of the report zero values are found. Our computer system reads "less than" values as zero for summaries, as well as in computing averages. In those areas where zeros are found the reader can find appropriate Method Detection Limit (MDL) in the table of data. Because "less than" values are averaged as zero a number of the summary table values are lower than the detection limits.

The data tables may also contain values expressed as a <X (less than) with some number X. For example, the Diazinon value for PLE on March 10, 1998 (in the table below) is reported as <2.4 ug/L (see the below table); this indicates that one or more, of two or more, determinations was above the MDL, while the average was below the MDL. This value is still treated as a zero for averaging and other summary calculations. Note also, that sub-totals and totals consisting of multiple analytes (see below) are also reported as "<X", where the "X" value is the highest MDL for the particular group of analytes. This has the same significance as a "ND" or not detected.

Organophosphorus Pesticides

		PLE	PLE	PLE	PLR	PLR	PLR
		10-MAR-1998	27-APR-1998	10-SEP-1998	10-MAR-1998	27-APR-1998	10-SEP-1998
	MDL Units	0311980006	0428980006	9809107494	0311980007	0428980007	9809107515
Demeton O	1.69 UG/L	ND	ND	ND	ND	ND	ND
Demeton S	1.82 UG/L	ND	ND	ND	ND	ND	ND
Diazinon	2.41 UG/L	<2.4	ND	ND	<2.4	ND	ND
Guthion	7.1 UG/L	ND	ND	ND	ND	ND	ND
Malathion	2.98 UG/L	ND	ND	ND	ND	ND	ND
Parathion	2.83 UG/L	ND	ND	ND	ND	ND	ND
Thiophosphorus Pesticides		<7.1	<7.1	<7.1	<7.1	<7.1	<7.1
Demeton -O, -S		<1.8	<0.2	<0.2	<1.8	<0.2	<0.2
Total Organophosphorus Pesticides		<7.1	<7.1	<7.1	<7.1	<7.1	<7.1

A further limitation, that the user of this data should note, is that confidence in the results of an analysis is heavily dependent upon the concentration relative to the Method Detection Limit (MDL). For the most part our detection limits have been established using the procedure in 40 CFR, part 136. This statistical basis for the MDL results in a defined statistical confidence (at the 99% Confidence Interval) of essentially " 100% of the result at or near the MDL. Only at concentrations approximately 5 times the MDL is the confidence interval at " 20% relative. While the precision of our methods generally ranges from 2-3 significant figures, the above limitations of confidence should always be considered.

¹ as stipulated in SDRWQCB "Receipt of Monitoring Reports for Order No. 97-03, dated January 11, 2002.

DISCUSSION:

Plant Changes

During the end of October and most of November of 2004 the plant was shut down and two additional Electro Dialysis Reversal (EDR) units, used to demineralize tertiary treated water, were added to the plant. This increased the capacity for the production of reclaimed water with a total dissolved solids (TDS) concentration of less than 1000 ug/L to about 15 MGC. In addition, the weir that separated the wet well that had held disinfected final effluent (DFE), that is tertiary treated effluent that was used for in-plant utility water, and the wet well that contained reclaimed water (DFE that was partially demineralized) was lowered to the level of the original design. This effectively created one large, blended wetwell and has eliminated the distinction between reclaimed and utility water, and eliminated the sample site for DFE. The old set-up is shown in the plant schematic on page 9, and the new on the schematic on page 10.

Compliance Issues

The only compliance issue this year has been the moving average limit for the concentration of manganese of 50 ug/L was exceeded from August through December. The manganese concentration in the reclaimed water jumped to over a hundred ug/L in June and remained over a hundred through October. The plant was off line in November. The concentration in December was at 65 ug/L. Discussions with Operations have not led to a correlation with plant conditions so far, however the problem corresponds to the time period when ferrous chloride was used for odor control at the Penasquitos Pump Station that feeds one of the two influent lines into the treatment plant. Ferrous chloride was fed from the end of May (after the date samples for May were taken). In November the plant was shut down, and in December the flow was rerouted past the Penasquitos Pump Station so maintenance could be done. That rerouting coincided with the drop in manganese in the reclaimed water. Operations has felt that the ferrous chloride use may have caused some of their red water issues in the plant, and are looking at adjusting feed rates at the pump station to minimize this. Analysis of both ferric and ferrous chloride have shown manganese as a significant component, when one is concerned about parts per billion issues. Analysis of the ferrous chloride solution in October showed the manganese concentration to be 799,000 ug/L. The concentration of manganese in the Penasquitos line during its period of use, June through October, was about double (in the 200s) what it was before that. Although the main influent line, from Pump Station 64, into the North City Water Reclamation Plant has consistently had a manganese concentration of over 200 ug/L the form the manganese is in (oxidation state) may be more treatable. Confirmation that this may be the source of the problem will come in the next few months, since the feed of ferrous chloride as an odor control chemical has been suspended in mid January because the colder weather and higher winter flows have reduced the need for it.

As the problem is further defined and solutions attempted, one must keep in mind that the manganese limit of 50 ug/L is a "secondary" standard based on aesthetics (color) and not health. Indeed it is an essential mineral that is included in daily vitamin supplements at concentrations around 2500 ug.
